

Diagrammatic representation of the detection of a ligand-membrane receptor interaction

in the absence of the ligand there is  
no phenotypical change in the cell

in the presence of the ligand there is a  
phenotypical change in the cell

LBD : ligand-binding domain  
M : mediator

A : adaptor  
E : effector

FIG. 1

Diagrammatic representation of a ligand-membrane receptor interaction of an enzyme-coupled and of a G-protein-coupled receptor

**FIG. 2a**

in the absence of the ligand there is  
no phenotypical change in the cell

in the presence of the ligand there is a  
phenotypical change in the cell

LBD : ligand-binding domain  
M : mediator

A : adaptor  
E : effector

**FIG. 2b**

in the absence of the ligand there is  
no phenotypical change in the cell

in the presence of the ligand there is a  
phenotypical change in the cell

Diagrammatic representation of the detection of the interaction between angiotensin and the angiotensin 1a receptor

**FIG. 4**

Diagrammatic representation of the detection of the interaction of EGF with the EGF receptor

FIG. 3
